Una "facciata o parete ventilata" rappresenta la facciata di un edificio caratterizzata da un rivestimento esterno costituito da elementi di varia natura come piastrelle e/o lastre in gres porcellanato, doghe, tavole, ecc. contraddistinti dalla messa in opera a secco tramite dispositivi di sospensione e di fissaggio di tipo meccanico o chimico-meccanico, che ne mantengono distanziato il lato nascosto dalla retrostante parete di tamponamento.

Su questa viene generalmente applicato un isolamento a cappotto che realizza una sottile intercapedine entro la quale può circolare l'aria esterna. Le facciate ventilate garantiscono quindi ottime performance sia in inverno che in estate, adatte sia alle nuove costruzioni che per gli interventi di riqualificazione di costruzioni esistenti.

Le prestazioni termo-energetiche sono ottime e, combinate alla flessibilità architettonica ed estetica, rappresentano i motivi per cui questi sistemi di posa sono sempre più diffusi nell'architettura contemporanea.

**I vantaggi delle facciate ventilate:**

- Importantissimo risparmio energetico, grazie alla ventilazione dell'intercapedine e all'isolante, che elimina i ponti termici;
- Isolamento acustico, fungendo da barriera protettiva;
- Salvaguardia delle pareti dagli agenti atmosferici e dagli sbalzi termici;
- Eliminazione dei problemi di condensa superficiale e di umidità;
- Manutenzione semplice, i pannelli sono quasi sempre ispezionabili per eventuali verifiche tecniche;
- Elevato valore architettonico ed estetico.

A "ventilated facade or wall" is the facade of a building characterized by an external coating.

This coating consists of various elements such as porcelain stoneware tiles and slabs, slats, etc. and is characterized by dry installation by mechanical or chemical-mechanical suspension and fixing devices, which keeps the hidden side separate from the rear wall behind.

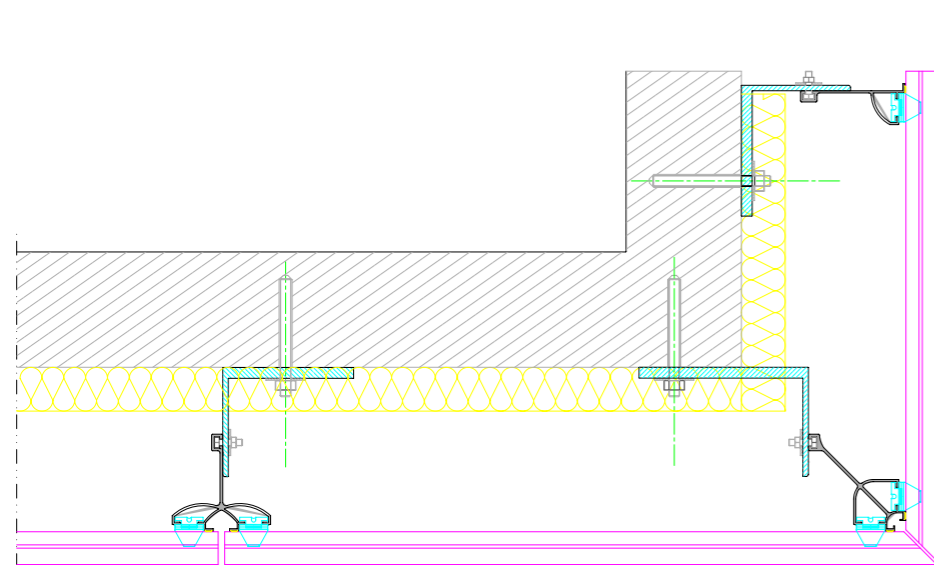

An external insulation is generally applied on this to create a thin cavity allowing the circulation of external air. Therefore, ventilated walls guarantee excellent performances both in winter and in summer and are suitable for both new buildings and requalification of existing ones.

The thermo-energetic performances are excellent and combined with the architectural and aesthetic flexibility, for which these systems are becoming more and more popular in contemporary architecture.

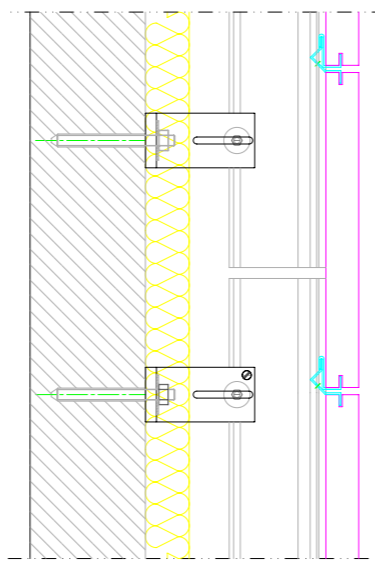

**The advantages of ventilated facades:**

- Important energy savings thanks to the ventilation of the interspace, which eliminates thermal bridges;
- Acoustic insulation, acting as a protective barrier;
- Protection of the walls against atmospheric agents and thermal shocks.
- Elimination of humidity on the surfaces;
- Easy maintenance, the panels can always be inspected for any technical check;
- High architectural and aesthetic value.

LOT MINIMUM DE PRODUCTION IMPÉRATIVE. // POUR ULTÉRIEURES INFORMATIONS MERCI DE CONTACTER L'AGENT D'USINE OU BIEN L'AREA MANAGER. // ES WIRD EIN MINIMUM PRODUKTIONSBESTAND GEFRAGT. FÜR WEITERE UND ZUSÄTZLICHE ERKLÄRUNGEN BITTE DEN GEBIETSVERTRETER ODER DEN ZUSTAENDIGEN VERKAUFSLEITER FRAGEN.

Une « façade ou mur ventilé » est un système de revêtement extérieur réalisé par l'installation à sec de différents éléments tels que carreaux et/ou grandes dalles en grès cérame, lattes etc. La mise en oeuvre est réalisée généralement par la réalisation d'une couche d'isolation. Sur cette couche on utilise de supports spéciaux et dispositifs de fixation qui garantissent un système d'ancrage mécanique ou bien chimique-mécanique des dalles.

Grâce à cette structure, entre le mur porteur et le matériel de revêtement il y a toujours une lame d'air qui permet une ventilation continue. Les façades ventilées garantissent donc des excellentes performances soit en été soit en hiver. Elles peuvent être adaptées à la fois aux nouveaux bâtiments et aux bâtiments existants avec un travail de réaménagement et requalification de la façade.

Les performances thermo-énergétiques sont excellentes et, combinées à la flexibilité architecturale et esthétique, représentent la raison pour laquelle ces systèmes de pose sont de plus en plus populaires dans l'architecture contemporaine.

**Les avantages des façades ventilées :**

- Economie d'énergie très importante grâce à la cavité de ventilation et la couche d'isolation. Cette technologie élimine les ponts thermiques ;
- Isolation acoustique agissant comme une barrière de protection ;
- Protection des murs contre les agents atmosphériques et contre les variations brusques de température ;
- Elimination des problèmes de condensation et humidité ;
- Entretien simple de la façade, les panneaux sont presque toujours inspectables pour éventuels contrôles techniques ;
- Haute valeur architectural et esthétique.

Eine „Fassade oder belüftete Wand“ repräsentiert die Fassade von ein Gebäude, das durch eine Außenverkleidung aus Elementen verschiedener Art gekennzeichnet ist. Dies können Feinsteinzeugfliesen und/oder Platten, Diele, usw. sein, ausgezeichnet durch die Trockenmontage mit Aufhängungsvorrichtungen mit mechanischen oder chemisch-mechanischen Befestigung, die die verborgene Seite der dahinter liegenden Fuellwand auf Abstand halten

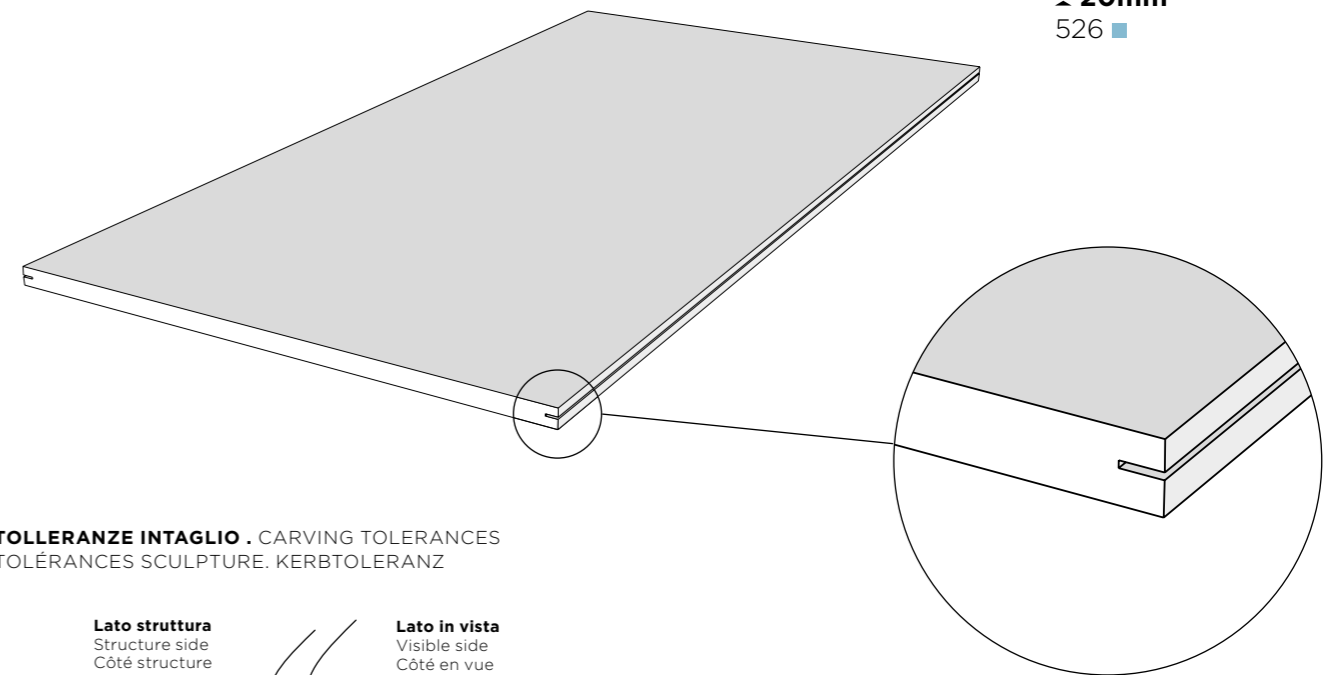

Hierzu wird in der Regel eine Isolierung angebracht, der einen dünnen Hohlraum die Außenluft zirkulieren lassen kann. Die belüfteten Fassaden garantieren daher hervorragende Leistungen sowohl im Winter als auch in Sommer, geeignet für Neubauten und Sanierung bestehender Gebäude.

Die thermoenergetische Leistung ist ausgezeichnet und kombiniert zur architektonischen und ästhetischen Flexibilität repräsentieren die Gründe, warum diese Installationssysteme immer beliebter in der zeitgenössischen Architektur werden.

**Die Vorteile belüfteter Fassaden:**

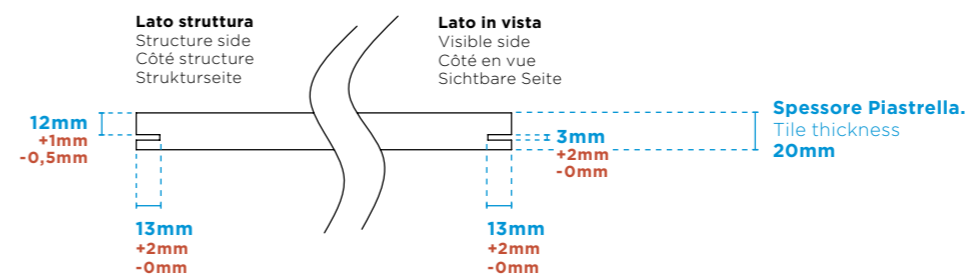

- Sehr wichtige Energieeinsparung dank Belüftung des Hohlraums und der Isolierung, Wärmeschutz, die Waermebruecken beseitigt.
- Schalldämmung als Schutzbarriere;
- Schutz der Wände vor Witterungseinflüssen und vor thermische Veränderungen;
- Beseitigung der Probleme der Oberflächenkondensation und Feuchtigkeit;
- Einfache Wartung, die Paneele können fast immer inspiziert werden für technische Überprüfungen;
- Hoher architektonischer und ästhetischer Wert.
